Professional Summary

Result-driven Software Engineer with solid experience in Full-cycle Development and Data Engineering. Expert in building scalable architectures, complex ETL pipelines, and modernizing data workflows using DataOps concepts, Python, and data virtualization (Delphix). Proficient in Infrastructure as Code (Terraform) and Cloud Environments (AWS/GCP), with a proven track record of reducing data friction and accelerating deployment lifecycles.

Experience

Fundação Sagres

Junior Software Engineer

Remote

Aug. 2024 – Present

- **Command Center Project:** Designed and documented the system architecture for a centralized operational metrics and file management hub, significantly improving data visibility for leadership.
- Developed and optimized high-volume ETL pipelines using Python and Pandas to process large-scale government datasets (student and teacher records), ensuring high data availability and integrity.
- Implemented robust unit testing and verification frameworks leveraging `unittest.mock` to isolate system dependencies and guarantee software reliability.
- Deployed DataOps strategies to accelerate testing environment provisioning, leveraging data masking and Delphix data virtualization techniques to ensure strict data compliance (LGPD/GDPR).
- Collaborated directly on database modeling and automated sync scripts, reducing data friction between software development and infrastructure teams.

EDOO

Software Engineer

Remote

Jan. 2023 – Jan. 2024

- Delivered Full-stack features using Node.js and Angular, designing resilient RESTful APIs and highly performant user interfaces.
- Acted as a technical lead in architectural research for new greenfield projects and implemented application internationalization (i18n) policies to support product expansion into Spain.
- Enforced high code coverage and minimized technical debt by implementing automated unit and integration tests using Jest.
- Managed containerized workflows and deployment pipelines using Docker, Google Cloud Platform (GCP), MySQL, CircleCI, and SonarQube.

Descomplica

Software Engineer Trainee

Remote

Jul. 2022 – Dec. 2022

- Developed scalable backend features using NestJS and frontend applications with React under agile methodologies (Scrum).
- Optimized the user onboarding pipeline by architecting a reusable system tool powered by creational and structural Design Patterns (Factory and Decorator).
- Provisioned and managed cloud resources within AWS environments utilizing Terraform as Infrastructure as Code (IaC).

CONFEA

Software Engineer Trainee

Brasília, DF, Brazil

Jan. 2021 – May 2022

- Led the refactoring of legacy monolithic institutional systems into modern, decoupled microservices using .NET 6 and C#.
- Implemented an event-driven architecture utilizing RabbitMQ message brokers and managed API Gateway integrations with Ocelot and gRPC.

Education

University of Brasília (UnB)

Bachelor of Science in Software Engineering

Brasília, DF, Brazil

Aug. 2018 – Dec. 2026 (Expected)

- Academic focus on Requirements Engineering, Software Quality Assurance, DevOps, and Agile Project Management.
- Active participant in advanced research labs and extension projects bridging software solutions for public and private sectors.

Technical Skills

Languages: Python, TypeScript, JavaScript, Node.js, C#, .NET 6, Haskell, Prolog, SQL

Frameworks/Libraries: React, Angular, Nest.JS, Pandas, NumPy, Jest, Ocelot, gRPC, RabbitMQ

Cloud & DevOps: Amazon Web Services (AWS), Google Cloud Platform (GCP), Terraform, Docker, CircleCI

Data Tools: Delphix Virtualization, Jupyter Notebooks, DataOps, ETL Pipelines

Methodologies: Agile (Scrum), Test-Driven Development (TDD), Microservices, System Refactoring

Languages & Certifications

Languages: English (B2 - Upper-Intermediate), Spanish (Intermediate), German (Beginner)

Certifications: Delphix Professional (Training Path / In Progress)
